Puzzles not available outside Scandinavia.

BRIO

Campaign material

What do the symbols on our game boxes stand for?

First instance. Played by one player at a time, but the number of participants is unlimited. Recommended from the age of 6.

Second instance. Played by two players at a time, but the number of participants is unlimited. Recommended from the age of 4.

BRIO and QUALITY

The BRIO wooden toys are made of beechwood. Sometimes some turned details are of selected knotless birchwood.

The final assembly, inspection and test are mainly done by hand, and that contributes to the high BRIO quality.

Safety

All possible efforts are made to make the BRIO toys as safe as possible.

For the bright BRIO colours we use, without any exception, non-toxic fast hardened lacquers. Each delivery of paint to BRIO is examined by a well-reputed English laboratory, which guarantees that Swedish as well as international regulations and prescriptions concerning non-poisonousness have been followed.

Furthermore the BRIO collection is tested every year in England and the U.S. at test institutes specialized in the safety of toys. Their test reports and recommendations help us to improve the quality of our toys day by day, and all markets benefit by these efforts to make our toys safer.

BRIO LEK & LAR

is the division of the BRIO group that is responsible for the development and distribution of play material and educational equipment for pre-schools, kindergartens and other educational institutions.

The representatives of BRIO LEK & LAR also take part in the development of the general BRIO collection, and they administrate and organize play tests among children, which precede the introduction of all new BRIO toys.

A great number of the BRIO wooden toys are included in the basic equipment of the educational institutions.

Swedish and international design-protections and patents protect the BRIO products against copying.

Layout: Rolf Hans Osterberg, Karin Nilsson, BRIO Advertising Dept.

Printed 1980 by AB Falma Tryckeri, Västerås.

The image displays a variety of BRIO wooden toys. At the top center is the BRIO logo in a black box with a red border. Below it are several trucks: a red one with a white cargo box, a blue one with a white cargo box, and a yellow one with the BRIO logo on its side. To the right is a black steam locomotive. In the middle, a train consisting of a blue engine, a green passenger car, and a yellow passenger car is on a wooden bridge. A red car is also on the bridge. In the foreground, there are various wooden connectors, including a red and blue axle with wheels, a red spring, and several white and yellow beams with holes. A small red tray contains several green and yellow pins.
